

## CASE STUDY

### SUDIMA HOTEL Auckland, New Zealand

#### PRODUCTS:

XTI | 3.0 Square IP66 / IK10+

XTA | 2.0 Square IP55

XTA | 3.0 Square IP55

#### OVERVIEW

Located near the NZ International Convention Centre, the newly constructed 200 room Sudima Hotel opened recently.

Xero Linear Lighting was proud to supply several of their XTA and XTI IP66 and IK10+ profiles for the main entry areas. Mike Bernard, Xero's Regional Partner for Auckland, New Zealand created the entire exterior lighting design calculations for the Holdsworth Group Project Manager and Electrical Contractor, Lloyd Electrical to help produce this beautifully streamlined, aesthetic result.

**Project Manager:** Holdsworth Group Ltd

**Electrical Contractor:** Lloyd Electrical Ltd

#### BRIEF

This project was a complete new build where Xero Linear Lighting Systems were asked to design the exterior Lighting in conjunction with CDA Architects. The areas of prominence were the Port Coch'e, building frontage along with the main entrance.

#### LIGHTING

"The Port Coch'e frontage used the XTA 3.0 Square IP55 which is a larger rectangular shape. Two linear lengths lead you into the main foyer entrance where people enter the Hotel.

In the front Entrance, a series of Rectangular shapes using the XTA 2.0 Square IP55. This look has a very retro feel, that harmonises with the building's frontage.

Those viewers that bypass can enter the Restaurant and bar has the XTI 3.0 IP66 mounted to the glazed canopy, this look really effective."
