

INSTALLATION INSTRUCTION

- 1 Support structure
- 2 Threaded Stud Bracket (thread length 30mm)
- 3 Nut - M10 x 1.5
- 4 Luminaire

1

Identify components

Note: The Threaded Stud Brackets are supplied assembled to the luminaire

*Note: Nut - M10 x 1.5 nuts are NOT supplied

Luminaire

Suspension Plan

2

Determine mounting location

Threaded stud brackets can be moved along the length of the luminaire as long as the rules on the suspension plan are obeyed. To move, loosen the grub screw on each bracket, slide in to position, then re-tighten.

3

Position luminaire and mark the stud locations

4

Remove luminaire and drill holes for mounting

Note: If the flex exits through the top of the luminaire also drill a hole of sufficient size for the flex and IP gland to pass through

5

Connect Luminaire to mains power supply

6

Return luminaire to installation location, pass threaded studs through the previously drilled holes and fasten nuts to studs. In locations subject to vibration it is recommended to use a thread locker on the studs
